Hello:

The required base flow release period mandated in the 2006 Record of Decision expires the end of February. Flaming Gorge releases will be decreased to optimize reservoir storage and meet the May 1 elevation target of 6027 feet. Therefore, beginning Thursday, March 1, 2018, releases will be revised according to the attached schedule.

The average daily release shall remain at 1,700 cfs/day, and depending upon observed hydrology the spring base flow release will increase or decrease to meet the May 1 elevation target of 6027 feet as we receive updated forecast information throughout the period.

This notification supersedes all previously issued notifications and is current until a new one is issued. All times identified in this notification are in local time and not hour ending.

Current Flaming Gorge data and information can be accessed here: <https://www.usbr.gov/rsvrWater/rsv40Day.html?siteid=917&reservoirtype=Reservoir>

Kind regards,
Heather
